

survey_as_administered

Feedback form, as administered

Delivered through Microsoft Forms. Anonymous; no name or email is recorded. The rating items were presented as two Likert grids, so participants saw six questions in total.

Self-Serve Analytics — feedback

This is part of a Master' s project. The form is anonymous — it does not ask for your name or email, and the answers are used only in the dissertation. You can stop at any point without giving a reason.

If you have any questions, now or later, contact Yanfei Yu at 3155021Y@student.gla.ac.uk.

1. I have read the above and agree to take part. *(required)*

- Yes
 - No
-

2. How would you describe your SQL?

- None at all
 - Beginner — I have seen it but could not write much
 - Intermediate — I can write basic queries
 - Confident — I write it regularly
-

3. How much do you agree with each of these? *(required)*

Strongly disagree • Disagree • Neutral • Agree • Strongly agree

3.1 It was clear which analyses I could run, and why the others could not run yet.

3.2 Describing what my columns mean made sense to me.

3.3 Seeing the SQL behind an answer increased my confidence in it.

3.4 I felt in control of what happened to my data.

3.5 I would trust this tool for everyday questions about my own data.

4. Answer quickly — your first reaction is the most useful one. Some statements are deliberately negative, so read each one. *(required)*

Strongly disagree • Disagree • Neutral • Agree • Strongly agree

4.1 I think that I would like to use this system frequently.

4.2 I found the system unnecessarily complex.

4.3 I thought the system was easy to use.

4.4 I think that I would need the support of a technical person to be able to use this system.

4.5 I found the various functions in this system were well integrated.

4.6 I thought there was too much inconsistency in this system.

4.7 I would imagine that most people would learn to use this system very quickly.

4.8 I found the system very cumbersome to use.

4.9 I felt very confident using the system.

4.10 I needed to learn a lot of things before I could get going with this system.

5. What was good? *(long answer, optional)*

6. What could be improved? *(long answer, optional)*

Notes on the instrument

Question 4 is the System Usability Scale (Brooke, 1996), reproduced verbatim. Responses are scored by taking (answer – 1) for the odd-numbered statements and (5 – answer) for the even-numbered ones, summing the ten, and multiplying by 2.5, giving a score from 0 to 100 that can be compared against the published benchmark of 68. The alternating positive and negative phrasing is part of the instrument.

Question 3 is project-specific, with one statement for each claim the system makes: progressive unlock (3.1), no-code configuration (3.2), transparency of the generated SQL (3.3), the user' s control over cleaning (3.4), and overall trust (3.5).

Both grids used a five-point scale so the two sections could be read on the same footing.
